AREAS OF RISK

While we anticipate a robust *El Niño* for the peak of the Atlantic hurricane season, the tropical and subtropical Atlantic have continued to anomalously warm to near-record levels. *El Niño* increases vertical wind shear in the Caribbean and tropical Atlantic, but the anomalous warmth in the tropical and subtropical Atlantic may counteract some of the typical *El Niño*-driven increase in vertical wind shear. The probability of U.S. major hurricane landfall is estimated to be near the long-period average. As is the case with all hurricane seasons, coastal residents are reminded that it only takes one hurricane making landfall to make it an active season for them. They should prepare the same for every season, regardless of how much activity is predicted.

Forecast Parameters	CSU Forecast for 2023*

PREPAREDNESS CHECKLIST

HEAT STRESS SAFETY

- ☐ Bottled drinking water
- ☐ Electrolyte replacements
- ☐ Water coolers/ice chest
- ☐ Sunscreen

SAFETY

- ☐ Fully stocked first aid kit
- ☐ Sanitation
- ☐ Rainwear, Sunscreen, Nitrile Gloves
- ☐ Marking paint
- ☐ Barricade tape
- ☐ Traffic cones, Floor cones, Barricades, Delineator, Warning flags, Warning lights, Warning Kits

TEMPORARY POWER SOLUTIONS

- ☐ Portable generators, Power stations, Temp Power cords
- ☐ High Quality LED Work Lights
- ☐ Flood lights
- ☐ Extension cords
- ☐ Cable ties and cutters
- ☐ Wrench and pliers to turn off utilities

DAMAGE RESTORATION

- ☐ Ladders
- ☐ Fans & blowers
- ☐ Pressure washers
- ☐ Shovels, rakes and wheelbarrows
- ☐ Drywall tools
- ☐ Power tools
- ☐ Plastic bags and sheeting PLP

PORTABLE GENERATOR SAFETY TIPS

Provided by Generac

TAKE IT OUTSIDE

When using a portable generator for emergency power, it is important to be aware of potential hazards. Always keep these basic guidelines in mind when running your generator outside of your home so that you operate it responsibly and safely.

CARBON MONOXIDE AND VENTILATION

- Using a generator indoors can kill you in minutes. Exhaust contains carbon monoxide, a deadly poisonous gas you cannot see or smell.
- Never run a generator indoors or in partly enclosed areas such as garages.
- Only use outdoors and far from windows, doors, vents, crawl spaces and in an area where adequate ventilation is available and will not accumulate deadly exhaust gas.
- It is recommended that you install battery operated Carbon Monoxide alarms/detectors indoors according to manufacturer's instructions / recommendations.

GENERATOR PLACEMENT AND OPERATION

- Keep children away from portable generators at all times.
- Allow at least five feet of clearance on all sides of the generator when operating.
- Generators can be used during a wide variety of weather temperatures, but should be protected from the elements when not in use to prevent shorting and rusting.
- Operate the generator only on level surfaces and where it will not be exposed to excessive moisture, dirt, dust or corrosive vapors.
- Inspect the generator regularly and contact the nearest authorized service provider for repair or part replacements.
- Always disconnect the spark plug wire and place the wire where it cannot contact the spark plug to prevent accidental starting when setting up, transporting, adjusting or making repairs to the generator.

ELECTROCUTION AND ELECTRICAL SHOCK HAZARDS

- Do not connect your generator directly to your home's wiring or into a regular household outlet.
- Always start or stop the generator only when no electrical loads are connected.
- Do not operate the generator in wet conditions such as rain or snow.

PORTABLE GENERATOR SAFETY TIPS

Provided by Construction Electrical Products

POWER DISTRIBUTION UNITS

- Add overcurrent and GFCI protection to portable and temporary electrical systems, allowing a user to 'plug and play' safely and quickly without danger to themselves
- Keep job sites and work areas code compliant to the N.E.C. and OSHA
- Allows the temporary power closest to where the work is being performed

✓ PROPER GENERATOR CABLE USE
